

Industrial Flooring Solutions for Automotive

Our Automotive System

High build, high strength & hard wearing

3-5mm topping, 4 layer system

Long service life with little-to-no maintenance

Specifically designed to meet the needs of the motor industry:

P4 slip resistant (Australian Standards compliant) | Oil & chemical resistant | UV Stable | Easy to clean

Our Automotive Services

Floor Preparation

Floor preparation isn't optional - it's foundational.

Inadequate floor preparation affects the quality, durability and appearance of any installation. Poor adhesion leads to lifting, bubbling or cracking.

We prepare the substrate through diamond grinding or shotblasting, removing surface contamination & creating a CSP3 profile all with HEPA-filtered vacuums and work areas with air scrubbers.

Automotive Floor Coating

Suitable for workshops, manufacturing facilities, wash bays, parts storage, and detailing bays. With a wide range of colours available, your new floor can be matched to your brand.

Our Automotive Clients

About Us

- Second-generation family operated business
- Over 40 years' experience
- Servicing NSW & ACT
- No job too big or small
